

PCR Protocol

Purpose

Standard PCR protocol for DNA amplification.

Materials

- DNA template
- Forward and reverse primers
- PCR Master Mix
- Nuclease-free water
- PCR tubes

Procedure

1. Prepare the PCR reaction mix.
2. Add DNA template.
3. Place the tubes in the PCR machine.
4. Run the thermal cycling program.
5. Analyze the PCR product using agarose gel electrophoresis.

Notes

Use sterile technique and keep reagents on ice whenever appropriate.
